

Segment #6: US 90 from Old River Road to Cedar Avenue

Traffic Characteristics:

CONTEXT CLASSIFICATIONS
C2 - RURAL

C3C - SUBURBAN COMMERCIAL

Allowable design speed of 35-70 mph

This US 90 segment is primarily a four-lane roadway facility that transitions to two lanes from the bridge over the Yellow River to Old River Rd. There are median strips that transition to a center turning lane east of Enzor Rd. Sidewalk facilities begin west of Enzor Rd. and are present as you continue into downtown Crestview. The western portion of the corridor has intermittent paved shoulders and is surrounded by residential, vacant residential, and agricultural land. East of the Enzor Rd. intersection, the paved shoulders end and the corridor becomes more developed with commercial uses. Right-of-way varies greatly from 80 feet in the downtown area to 190 feet on the western portion of the corridor.

During the site assessment think about how a multi-use trail could fit within context of the corridor and what potential hazards and conflicts may exist.

Between 2015 and 2021:

2 occurred within or near a marked crosswalk
